

[ Appendices ]

**Appendix A Configuring Internet Explorer to use OASISPlus on your personal computer**

1. Open Internet Explorer
2. Open the Tools Menu then click on Internet Options
3. Click on the Security Tab (second one from top) then click on the Trusted Sites green button (has white tick sign in middle). Then click on the Sites button beneath it (See image 1).
4. In the “Add this Web Site to the zone”, type in oasisplus.mdx.ac.uk and click on the Add button. If you get the error message saying “Sites added to this zone must use the https:// prefix. This prefix assures a secure connection”, uncheck the box at the bottom that says “Require server verification (https) for all sites in this zone”, and then click on the Add button (See image 2).

**Click on Sites... button beneath Trusted Sites Green Button**

5. Click on OK when done and you'll be taken to the Security section. Now click on the Privacy button (next to security).
6. In the privacy section, the first thing we have to ensure is that Cookies are always allowed for the OASISPlus web site. Click on the Sites button and a “Per Site Privacy Actions” pop-up will show up. In the Address of Web Site, type in [oasisplus.mdx.ac.uk](http://oasisplus.mdx.ac.uk) then click on the Allow button. It will show [www.mdx.ac.uk](http://www.mdx.ac.uk) only in the Managed Web Sites area, but this is OK. Click OK when done.

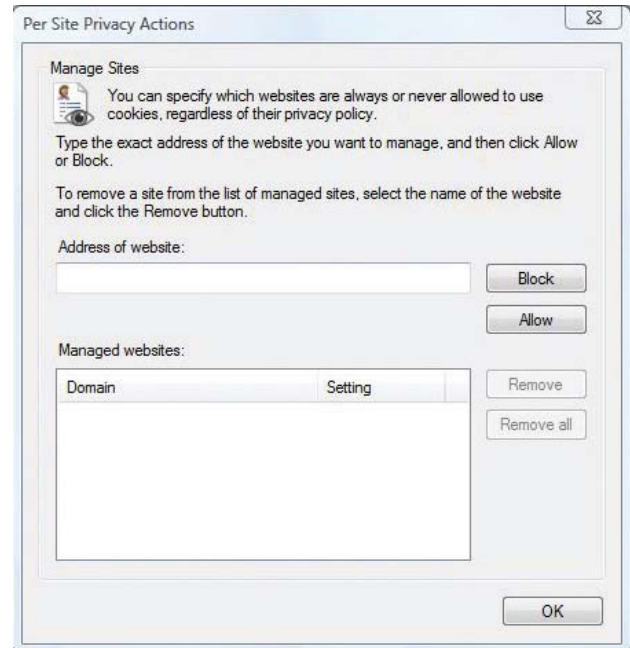

Image 4

7. You will be taken back to the Privacy section. At the bottom ensure that “Block pop-ups” is not checked. If there are sites that you wish the pop-ups to be blocked for, then check Block pop-ups and then click on Settings button to the right. The Pop-up Blocker Settings will appear. In the Address of web site to allow, type in [oasisplus.mdx.ac.uk](http://oasisplus.mdx.ac.uk) and then click on the Add button. At the bottom of the screen in the Filter Level, choose Low. Click Close, then Apply and then the OK button to close the Internet Options Menu. If this does not work, we suggest you use Mozilla Firefox (you will have to apply the same settings in there).

### **CONFIGURING FIREFOX (VER 1.5.0.3) TO USE OASISPLUS ON YOUR PERSONAL COMPUTER**

1. Open the Firefox web browser. Click on the Tools menu and select Options.
2. In the Privacy tab, click on Cookies (for users with newer or older version, please look for the Cookies tab) and then click on the Exceptions button. In the new window that opens up, type in [oasisplus.mdx.ac.uk](http://oasisplus.mdx.ac.uk) in the Address of web site area and then click on the Allow button. Click on close once done. (See Image 5 below).
3. Now you should look for the Content Tab. Once there, ensure the Block Popup Windows (for users with newer or older version, please look for the Block Popup Window) is checked and then click on Allowed Sites. In the Allowed Sites window, type in [oasisplus.mdx.ac.uk](http://oasisplus.mdx.ac.uk) in the Address of Web Site and then click on Allow. Click on Close once done (See Image 6).
4. Make sure that within the Content window the Enable Java and Enable Java Script boxes are checked.
5. Within the same Content Tab, the “Warn me when web sites try to install extensions or themes” should be checked. Click on the Exceptions button next to it. In the new window that opens up, type in [oasisplus.mdx.ac.uk](http://oasisplus.mdx.ac.uk) in the Address of web site area and then click on the Allow button. Click on close once done (See Image 6).
